

Morning Ritual

Don't just wake up.
Wake up with purpose.

GEETA-ONLY MVP

ANDROID FIRST

DAILY RITUAL

06:30

A focused MVP:
Alarm -> Gita -> Breath -> Tasks ->
Night reflection

Founder + developer alignment document | September 2026

What we are actually building

Start very small: one scripture, one daily ritual, one repeatable loop.

01

Gita-first

The MVP uses Bhagavad Gita shlokas only. No astrology, no large devotional library yet.

02

Morning-first

The app owns the first few minutes after the alarm: wake, read, breathe, decide what matters.

03

Light planning

The app stores the user's tasks and night plan, but it is not a full to-do or calendar app.

MVP principle: prove the daily morning habit before adding more religions, astrology, social features or complex productivity tools.

One day, from night to night

Every feature should support the same simple cycle.

The habit is not "open the app". The habit is "complete the morning and prepare for tomorrow."

Three audio moments, one experience

Audio is the product language. Keep each file purpose-built.

01

Alarm / wake loop

10-second seamless instrumental loop.
Repeats while the user wakes up.
Can become slightly stronger over time.
No speech or busy vocals.

02

Gita reading bed

Very soft 20–30 second instrumental loop.
Plays while the user reads the shlok and
simple meaning.
Music ducks when the user speaks.

03

Breathing bed

Soft 30–60 second ambient loop.
No lyrics. Designed for inhale / hold / exhale
guidance.
Can be reused across all Gita mornings.

MVP music library: produce a small set of excellent original instrumental assets, not hundreds of songs.

What happens when the alarm rings

The user should not be forced to interact instantly. Let them wake first.

01 Wake

Music starts. User can take 30–60 seconds to become fully awake.

02 Start

User taps "Start my day". Alarm sound fades or stops.

03 Ritual

The Gita reading + breathing flow begins.

Important UX

- Do not force a shlok immediately.
- Snooze is allowed.
- The first interaction should feel calm, not like a test.
- The user chooses when they are ready.

The core new experience

Every morning gives the user one shlok, one simple meaning, and one small moment to absorb it.

TODAY'S GITA

कर्मण्येवाधिकारस्ते
मा फलेषु कदाचन

Simple meaning

Focus on your actions today,
not on controlling the result.

READ • LISTEN • BREATHE

01

Shlok

Use verified Gita text. Start with easy,
meaningful verses.

02

Meaning

Translate the idea into simple Hindi /
Hinglish / English.

03

Daily thought

End with one sentence the user can
remember and apply.

MVP CONTENT RULE

1 shlok
+
1 simple meaning
+
1 easy thought
+
1 day of action

Breathing is the bridge between waking and acting

Keep it short, guided and easy. No need for a full meditation product in MVP.

01

Inhale

Slow inhale through the nose.
Example: 4 seconds.
Visual circle expands.

02

Hold

Brief comfortable pause.
Example: 2–4 seconds.
Visual circle stays still.

03

Exhale

Longer, slower exhale.
Example: 6 seconds.
Visual circle contracts.

Other simple options later Box breathing • 4-4-6 rhythm • body scan • 30-second gratitude pause • one-minute silence

MVP breathing = one simple pattern. Add more only after people actually use the reset.

Today's tasks - lightweight, not a full to-do app

Tasks exist to turn morning intention into action.

TODAY

☐ Finish project proposal

☐ Gym - 7:00 PM

☐ Read 10 pages

01

Add task

Name + optional time + optional reminder.

02

Remind

Send a simple reminder at the chosen time.

03

Complete

One tap to mark done. Keep the language encouraging.

NOT IN MVP

Projects
Subtasks
Kanban boards
Calendar sync
Collaboration
Complex priorities

The app comes back at night

The night flow closes today and quietly prepares tomorrow.

"Tomorrow starts tonight."

What we add later for retention

Do not overload the MVP. Add engagement only after the core ritual is working.

01 Streaks

"7 mornings started with purpose." Simple and encouraging.

02 Share card

A beautiful morning image with today's Gita thought + streak.

03 Weekly recap

Mornings completed, tasks done, reflections saved.

04 Photo / memory

Optional daily photo or "one moment from today."

05 Personalization

Learn preferred wake time, themes and breathing style.

06 Challenges

7-day / 30-day Gita routines, only after retention is proven.

MVP engagement = basic completion history. Social sharing and richer streak mechanics come after the habit is proven.

What we deliberately do NOT build now

Saying “not now” is part of the MVP.

01 ASTROLOGY

Horoscope / Kundli / astrologers

02 RELIGIOUS LIBRARY

No multiple religions or huge scripture catalog

03 PRODUCTIVITY SUITE

No full calendar / project manager

04 SOCIAL

No feed / followers / public profiles

Expansion rule: add a feature only when it strengthens the wake → wisdom → action → reflection loop.

The first version can be explained in six screens

The developer should understand the user journey before thinking about implementation details.

01 Home

Next alarm + today's Gita

02 Set alarm

Time + days + morning experience

03 Wake

Music + Start my day + Snooze

04 Gita

Shlok + meaning + next action

05 Today

Breathing + task list

06 Night

Tasks + memory/journal + tomorrow plan

Design target: calm, premium, obvious. A person should understand what to do without reading instructions.

Build in this order

This keeps the team focused on the actual risk: does the morning ritual work?

1

Alarm engine

Reliable alarm, snooze, sound playback

2

Gita content

Shlok, meaning, morning thought

3

Morning reset

Breathing flow + completion state

4

Tasks

Today list + reminders + done

5

Night

Memory/journal + tomorrow planning

6

Basic retention

Completion history + simple streak

First test: can a new user set an alarm, wake up, complete one Gita morning and return at night?

What “working” means

Downloads are not the first proof. Repeated mornings are.

Activation

User sets first alarm

60%+ target

Morning complete

Wake → ritual → finish

60%+ target

D7 retention

Returns after one week

25–35% target

D30 retention

Keeps the habit

15–20% target

Night return

Plans tomorrow again

High is good

Completed mornings

10+ per engaged month

Behavioural depth

If people love the idea but do not return for a second morning, improve the habit loop before adding features.

Small MVP -> larger daily-life product

Earn the right to expand.

NOW | MVP

Gita only

Alarm • Gita reading • breathing • tasks • night memory/journal • basic history

NEXT | HABIT

Engagement

Streaks • share cards • weekly recap • photo/memory • better personalization

LATER | CONTENT

Spiritual depth

More Gita learning • audio library • other scriptures • festivals / Panchang

MUCH LATER | ECOSYSTEM

Services

AI guide • astrology • puja • commerce • partnerships

VISION

Wake → wisdom → breath → action → reflection → tomorrow

MVP in one sentence

This is the version we should align on before writing the full product spec.

A Gita-first morning ritual app that starts with a reliable alarm, guides a short reading + breathing moment, shows today's tasks, and returns at night for reflection and tomorrow's plan.

01 KEEP

Simple
Calm
Repeatable

02 PROVE

Morning completion
Return next day
Night planning

03 EXPAND LATER

Streaks
Sharing
More spiritual services

North star: make the first few minutes of the day worth repeating.
